SPECIFICATIONS

PRODUCT DETAILS: The remodel Vapour Barrier unit may be used with all NDR remodel housings, as well as all Razor series products. The vapour barrier is equipped with an adhesive mounting collar that adheres to the vapour barrier, drywall ceiling or rough-in plates (mounting plates), preventing air leakage from your living space into the attic.

Note: For rough-in plate installation, attach the adhesive collar to the top side (attic side) of the plate to maintain vapour barrier.

The body is constructed with flat flange all around to better enclose retrofit IC fixtures that are approved for insulated ceilings. Can be inserted into insulated ceiling after drywall is installed.

This is required to be installed in order to comply with specific National Building Code of Canada (NBC) regulations. Ideal for high energy efficiency construction and is rated for 90°C.

Technical information
 HEIGHT: 6.22" (158.0 mm)
 WIDTH: 8.27" (210.1 mm)
 LENGTH: 17.2" (436.9 mm)

Product codes
 VPR-400 : 4.75" (121mm) - Hole Diameter
 VPR-600 : 6.75" (159mm) - Hole Diameter

APPLICATIONS

The Remodel Vapour Barrier unit may be used with all NDR remodel housings. It is designed to prevent air leakage from your living space into the attic, or any insulated spaces.
